Re: **Henok Worku** (DOB: 8/25/1978)

To Whom It May Concern:

I am currently Henok for management of Type 1 diabetes. Multiple factors can contribute to fluctuating blood sugars, including stress secondary to prolonged work hours, shift work, and variable work schedules. Currently, Henok is struggling with managing his blood sugars and is experiencing persistent hyperglycemia due to prolonged and variable work hours. Please allow for Henok to work a set schedule and prevent mandatory overtime to assist in optimizing blood sugar control and his overall health.

If you have any questions or concerns, please don't hesitate to call.

Sincerely,

Electronically signed by:
Elizabeth Maria Tupta, NP
